Remote Traffic Generation

Rtg
service

A tool to assure your traffic revenue

RTG stands for Remote Traffic Generator. It's a service that enables telephone operators to successfully detect and prevent fraudulent access to its networks. The service is provided to the customer in the form of remote generated calls, which are scheduled via a Web Management Portal.

Benefits

- The system detects in real time international telephone traffic or long distance traffic that have not entered through the expected international switch exchanges.

- Assurance of income and earnings related to the interconnection between telephone networks.

- (RTG Plus) When used in conjunction with Cibertec anti-fraud solution, it this possible identifying vulnerabilities in the network and prevent internal fraud.
